Hey Rene -- all the round 3 sediment data are in (surface grabs, bioassay co-located samples, cores, Willamette Cove, etc.). The sediment trap data are not in. This question has come up before. I just checked in with Jay and the response is that it will be fairly easy to bring in the sed trap data though we need to make some decisions about it. In any case, Corinne is out until mid-September. When she returns she'll be working on the remaining R3 tissue data and possibly the trap data too.

Also note that with the R3 surface grab data, we forgot to sum the PAH data, so this will need to be fixed when Corinne gets back.

I'm at NOAA today if you need to reach me.

-R
